

## Mary's Center Partners with DataServ for Human Resources Automation

**St. Louis, MO — November 12th, 2015 —** [DataServ](#), a global Software as a Service (SaaS) provider of document and process automation solutions, has been selected by [Mary's Center](#) for human resources (HR) automation. Founded in 1988, Mary's Center is a Federally Qualified Health Center that provides health care, family literacy, and social services to individuals whose needs too often go unmet by the public and private systems. Mary's Center is utilizing DataServ's [Hire to Retire](#) (H2R) solution because it wanted to enhance the security and confidentiality of their employee files, increase the safety of these files in case of a disaster, and eliminate the mountains of paper that were prevalent in their HR department. DataServ's standard H2R solution includes full Digital Mailroom services, workflow automation, Human Resources Information System (HRIS) integration, document cross-linking, and much more.

"Our H2R automation solution continues to grow in popularity as more and more organizations realize how valuable it is to have all incoming HR documents converted into easy-to-manage, fully cross-indexed and linked electronic files," says DataServ Founder/CEO Jeff Haller. "Mary's Center had several needs that dovetailed perfectly with what our H2R solution addresses, so they were an excellent fit for our services. This is a tremendous organization that has offered health care and many other services to people who couldn't otherwise afford them, and we couldn't be more thrilled to be partners with them given the positive impact they are making in the community."

Mary's Center is excited about what DataServ's HR automation solution can do for their organization.

"DataServ's H2R solution is perfect for us because we had a need to streamline our HR processes and free up myself and other busy executives from having to manually approve pay increases and other similar tasks," says Carlos Marroquin, Director of Human Resources at Mary's Center. "In addition, it is extremely important for the organization to ensure that our documents are safe if something were to happen to our building, and with DataServ's H2R solution we know our documents will be secure at all

times.”

It is expected that by January 2016 Mary's Center will be fully automated.
